

Novel climate risk profiling tool and flood risk mapping tool for adaptation solutions

Description

Climate risk profile and flood risk mapping tool: provides an overview of climate risk issues in South Asia and Southeast Asia, including how climate change could potentially impact agriculture, water resources, human health, coastal zones, and infrastructure and industry. These maps incorporate current and future climate projections, specifying hazards, exposure and sensibility for selected systems (i.e. Human Settlement/ heat wave, Hydrology/drought) at district, national to regional level.
